

UNIVERSITY OF COLOMBO SCHOOL OF COMPUTING

DEGREE OF BACHELOR OF INFORMATION TECHNOLOGY (EXTERNAL) Academic Year 2006/2007 – 2nd Year Examination – Semester 3

IT3102: Object Oriented Systems Development PART 2 – Structured Question Paper

17th March, 2007 (ONE AND A HALF HOURS)

| To be completed by th | e candid | late | |
|-----------------------|----------|------|--|
| BIT Examination | Index | No: | |

Important Instructions:

- The duration of the paper is 1 ½ (one and a half) hours.
- The medium of instruction and questions is English.
- This paper has 4 questions and 12 pages.
- Answer question 1 and any two of the other questions only.
- · All questions will carry equal marks.
- Write your answers in English using the space provided in this question paper.
- Do not tear off any part of this answer book.
- Under no circumstances may this book, used or unused, be removed from the Examination Hall by a candidate.
- Note that questions appear on both sides of the paper.
 If a page is not printed, please inform the supervisor immediately.
- Non-programmable Calculators may be used.

| Questions Answered | | _ | | | |

| | | | Ques | tion numbers | |

| | | Question nu | ımbers | | |
|--|---|-------------|--------|---|--|
| To be completed by the candidate by marking a cross (x). | 1 | 2 | 3 | 4 | |
| To be completed by the examiners: | | | | | |
| | | | | | |
| | | | | | |

Based on the following case study answer question 1.

1)

Exclusive Corporation

Case Study

Exclusive Corporation is a company that manufactures household electrical appliances.

Information extracted by Systems Analyst and his team is as given below.

The sales catalogue contains 458 items of which more than half are produced by the company.

The following operations were identified.

Order Processing, Inventory Control, Production Scheduling, Manufacturing, Purchasing and Sales. Due to lack of funds, systems analyst was instructed only to conduct the analysis and design activities for Order processing and Inventory Control operations.

The operations are described in detail below.

Order processing

Each order is accompanied by a 10% deposit. The order processing clerk is responsible for handling the order through the following procedure.

- i. First he determines whether the customer is a new or old customer.
- ii. If the customer is a new customer, the address, contact number and 2 credit references are taken. Otherwise (if he is an old customer) the credit references are still taken to ensure that the customer is still financially sound.
- iii. Each item number, description and price is verified with the catalogue.
- iv. The manufactured and purchased items are grouped separately and sent to the Inventory Control Department.
- v. When the order-can be fulfilled notice is received from Inventory control, a copy of the notice is sent to the Sales Department.

Inventory Control

Inventory includes all raw materials, purchased items and manufactured components. Every item regardless of whether it is purchased or manufactured by the company itself has a maximum and minimum quantity level. These two quantity levels are adjusted based on the popularity of the item and is determined by the management. Every time the inventory control clerk updates an item after dispatching the consignment of items to the customer, he checks whether the remaining quantity falls below the minimum level.

If it does fall below the minimum, the following action is taken.

- If the item is manufactured by the company itself, it sends a product inventory notice to the Product Scheduling Department.
- If it is a purchased item (including raw materials), it sends a purchase order to the Purchasing Department.

When a consignment of raw materials or purchased items is received, the inventory is updated. If the quantity exceeds the maximum quantity, the following action is taken depending on the type of item.

- If it is a manufactured item, an overstock notice is made to management and product scheduling.
- If it is a purchased item, an overstock notice is sent to purchasing.

When customer order reaches inventory control, the following procedure is carried out.

- i. The order is broken down into sub-orders for each item.
- ii. The order is classified as order pending
- iii. Each sub-order is checked against the inventory to determine if it can be fulfilled under the current quantities in stock.
- iv. If the sub-order can be fulfilled by the inventory the following procedure is carried out.
 - the inventory is adjusted by the given amount
 - the sub-order is filed together with the original pending order
- v. If the sub-order cannot be fulfilled, the following action is taken.
 - If the item is manufactured, the sub-order is filed in the manufacturing suspense file and a produce order is sent to the production scheduling department. After manufacturing the item, Inventory Control Department receives a notice from the Manufacturing Department. Subsequently the Inventory is updated.
 - If the item is a purchased item, the sub-order is filed in the purchasing suspense file and a purchase order is sent to the purchase department. After the item is purchased, Inventory Control Department receives a notice from the Purchasing Department. Subsequently the Inventory is updated.
- vi. If all the sub-orders can be fulfilled, the order is classified as order *can be fulfilled*, and a notice is sent to the Order Processing Department indicating that the order can be fulfilled.
- (a) Identify the Actors and the corresponding Use Cases for the given system.

3) Flow of Events Document for the *Loan* Scenario for a Library System is given below.

Main Flow

Librarian enters the borrower id.

System checks whether borrower id exist.

If id does not exist (E-1) end use case.

Else

Check for Overdue Books.

If there are Overdue books

Display Overdue details

(E-2)

end use case

Check Over limit (E-3)

If reached over limit

Display Overdue Details

(E-3)

end use case

Enter copy id

Check Copy Exist

If not (E-4) end use case

Check Borrow able

If it is reference (E-5) end use case

Librarian Confirm Borrowing (C-5)

Update Borrowed Copy details

Alternate Flows

E-1: Borrower id does not exist

E-2: There are overdue books

E-3: Borrower has already borrowed 5 books

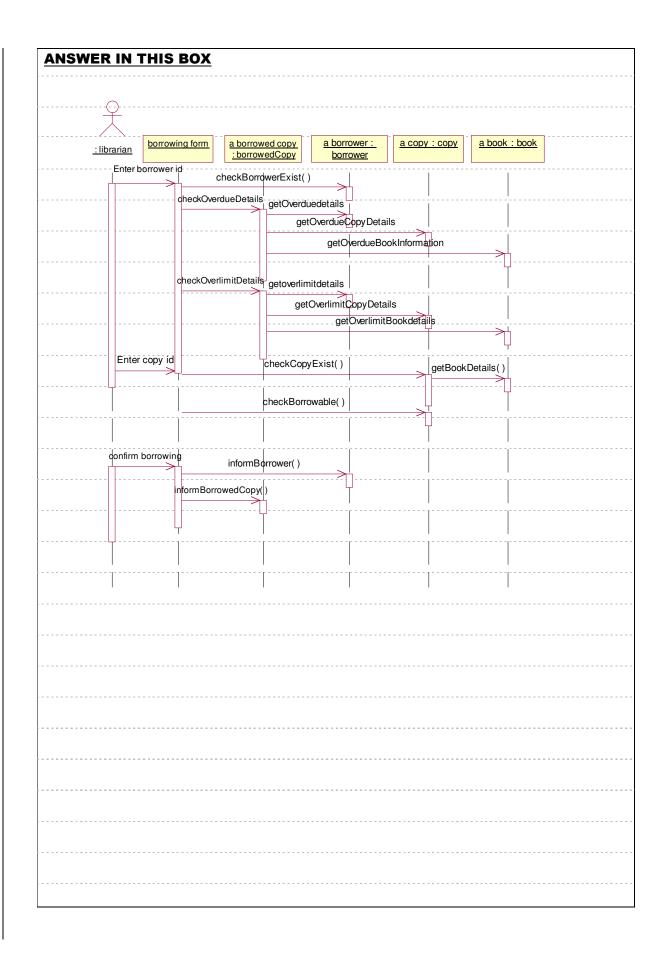

E-4 : Copy does not exist

E-5 : Copy is not borrowable

C-1: Confirm borrowing Message box

Draw a Sequence Diagram for the given Flow of Events Document for Loan Scenario. Assume that the objects which need to interact with this scenario are Book (Title, Author, etc.), Copy (CopyId, CopyType, Price, etc.), Borrower (BorrowerId, Name, etc.) and BorrowedCopy(BorrowerId, CopyId, BorrowedDate, ReturnedDate).

(100 Marks)

A payroll system to perform payroll calculations based on the type of an employee, needs to be created. The class 'Employee' should contain two protected attributes, namely *firstname* and *lastname*. The two attributes are of type String. The two argument constructor sets values to the two attributes. Two pure virtual functions are also defined in this class as *earnings* and *print*. Function *earnings* with return type double, will return the earning of the employee. *Print* function will output the employee's name.

The derived classes of Employee are 'Boss' who gets paid a fixed weekly salary regardless of the number of hours worked, and 'HourlyWorker' who gets paid by the hour and receives overtime pay.

The class 'Boss' contains a private attribute called *weeklySalary* of type double and there is a constructor with three arguments to set the *firstName*, *lastName* and *weeklySalary* in class Boss.

The class 'HourlyWorker' contains two private attributes wage and hours of type double. Wage to store the wage per hour and hours to store the hours worked per week. A constructor also there with four arguments to set the attributes firstName, lastName, wage and hours.

(a) What type of a class is Employee in terms of C++? Is 'earnings' a pure virtual function? Give reasons for your answer.

(10 Marks)

| ANSWER IN THIS BOX | | |
|--------------------|---|--|
| | Abstract class – Because of the pure virtual function | |
| | earnings pure virtual – Because we cannot calculate the | |
| | earnings for a generic employee. | |
| | | |

(b) Write down the definition for class Employee in C++. Implementations are not needed.

(20 Marks)

| ANSWER IN THIS BOX | |
|--------------------|---------------------------------------|
| class Employee{ | |
| pub | lic: |
| | Employee(const char *, const char *); |
| | virtual double earnings() = 0; |
